FLUE GAS DESULFURIZATION

The flue gas cleaning in Germany started with the adoption of the „Großfeuerungsverordnung“ - a regulation for open fire - in 1982. From the very beginning DÜCHTING PUMPEN took part in this business and today has one of the largest populations in European power stations. With the development of the material SICcast® now almost every FGD pump is built completely in SICcast®. Through this unique and innovative technology our products are increasingly favored beyond the borders of Europe.

MINING

Since the early 50s DÜCHTING has supplied pumps to the mining industry, especially German hard coal mining - at first only as maintenance and primarily with respect to underground mining. In the following years new pumps and wear-resistant centrifugal pumps for the processing of coal were added. Today DÜCHTING PUMPEN covers the entire market for centrifugal pumps in mining including high-pressure cooling centrifugal pumps.

WATER TREATMENT

DÜCHTING PUMPEN has worked in desalination with high-pressure centrifugal pumps in reverse osmosis now since the early 90s. While the demand for higher quantities and pressures has risen over the past years DP has kept up with the development and can now offer high-pressure pumps, including energy recovery units. The materials used for these pumps have been proven in numerous applications and the performance data has been adjusted to market demands by means of CFX programs.

INDUSTRY /
OIL & GAS

The chemical industry profits from the SICcast® - material of DÜCHTING PUMPEN.

As far as this field of application is concerned the high chemical resistance of SICcast® is of primary importance: its corrosion resistance with respect to acids will even exceed that of Ni-alloys.

These pumps are entirely metal free in all wetted areas - even the single- or double-acting mechanical seals.

Quality through experience

DÜCHTING PUMPEN is a privately owned German company with more than 77 years of experience in the field of advanced centrifugal pumps for use in many different industries.

Our motto “Quality Through Experience” forms the basis of our sophisticated product range. The capabilities of our company in the construction, manufacturing, testing and commissioning of our products is highly respected in the industries we serve.

Our reputation is based on a sustainable company policy, focusing on efficiency, reliability, innovation and thorough customer after-sales service which is provided by partners in the countries where our products are installed.

In order to meet the current demand for highly efficient and reliable products in seawater desalination, DÜCHTING PUMPEN offers optimized high-pressure pumps and energy recovery turbine units. To minimize total energy costs in high pressure seawater desalination plants, we are at your service during both design and operation.

Mineral cast pump

TYPE MC

Extremely high abrasion and corrosion resistant.

MC Design

Horizontal single-stage centrifugal pump in back pullout design.

- Pumping of abrasive and corrosive liquids
- All components which are in contact with the liquid are made of SICcast®
- Suction flange: Axial
- Discharge flange: Top (Vertical)
- Closed impeller with three-dimensionally curved vanes
- Impeller is key driven; reverse rotation (e.g. back-flushing) is possible
- Re-adjustable inclined gap between impeller and volute casing to optimize the efficiency and differential pressure after longer operation
- Single acting, metal free mechanical seal DÜTEC® with springs located outside of the liquid (other seal types available)
- Oil-lubricated antifriction bearings
- Back pullout design (the complete rotating assembly can be removed while the casing remains on its position)
- In many applications the wear life of SICcast® greatly exceeds conventional materials
- Available with heavy-duty bearing units for extreme applications
- Optimized design ensures easy maintenance and long service life even under difficult conditions

Fields of Application

Pumping of abrasive and corrosive liquids.

- Flue gas desulfurization
- Incinerators
- Pigment industry
- Chem. industry
- Water treatment
- Seawater desalination
- Fertilizer industry / Potash industry

Materials

Volute casing:	SICcast®
Impeller:	SICcast®
Shaft:	1.4462
Mechanical seal:	Silicon carbide (SiC)

Technical Data

Pump Size:	DN 32 to DN 300 (1 1/4" to 12")
max. Pressure:	10 bar (150 PSI)
max. Flow:	1500 m³/h (6600 gpm)
Total head:	up to 90 m (300 ft)
Rotating Speed:	up to 3600 rpm

Casing Cover

SICcast® mineral cast.

Impeller

SICcast® mineral cast.

Closed impeller with three-dimensionally curved vanes.

Volute Casing

SICcast® mineral cast.

Bearing housing

Designed to guarantee the continuous bearing lubrication. Provided with oil level indicator.

DÜTEC®

Proprietary Single Acting
Mechanical Seal DÜTEC®.

Rotor

Back pullout design.

Bearings

Oil lubricated antifriction
bearings.

Mineral cast pump

TYPE MCC

Extremely high abrasion and corrosion resistant.

MCC Design

Horizontal single-stage centrifugal pump in back pullout design.

- Pumping of abrasive and corrosive liquids
- All components which are in contact with the liquid are made of SICcast®
- Suction flange: Axial
- Discharge flange: Top (Tangential)

- Closed impeller with three-dimensionally curved vanes
- Impeller is key driven; reverse rotation (e.g. back-flushing) is possible
- Re-adjustable inclined gap between impeller and wear plate to optimize the efficiency and differential pressure after longer operation
- Single acting, metal free cartridge mechanical seal DÜTEC®-C with springs located outside of the liquid
- Durable, oil-lubricated roller bearings
- Back pullout design (the complete rotating assembly can be removed while the casing remains on its position)
- In many applications the wear life of SICcast® greatly exceeds conventional materials
- The patented design allows the production of extremely large pumps at low costs
- Currently, the most advanced and most durable technology for FGD absorber recirculation pumps

Fields of Application

Pumping abrasive and / or corrosive liquids.

- Flue gas desulfurization
- Incinerators
- Water treatment
- Seawater desalination

Materials

Volute casing: SICcast[®] / EN-GJS-400-15
(GGG40)

Impeller: SICcast[®]

Wear plate: SICcast[®]

Shaft: 1.0503 (C45)

Shaft sleeve: 1.4301 (1.4462)

Mechanical seal: Silicone carbide (SiC)

Technical Data

Pump Size:	DN 400 to DN 1000 (16" to 40")
max. Pressure:	6 bar (90 PSI)
max. Flow:	20000 m³/h (88000 gpm)
Total head:	up to 40 m (130 ft)
Rotating Speed:	up to 1200 rpm

DÜTEC® - C

The cartridge mechanical seal DÜTEC®-C consists of a rotating and a stationary unit which are assembled separately.

This derivative of the established DÜTEC® mechanical seal was especially geared towards this pump series and for the conveyance of corrosive and abrasive liquids.

Bearings

Oil lubricated antifriction bearings.

Casing Cover

SICcast® / EN-GJS-400-15
(GGG40).

Volute Casing

SICcast® / EN-GJS-400-15
(GGG40).

Rotor

Back pullout design.

Wear Plate

SICcast® mineral cast.

Impeller

Closed impeller with three-
dimensionally curved vanes in
SICcast® mineral cast.

Submersible mineral cast pump

TYPE MCS

Extremely high abrasion and corrosion resistant.

MCS Design

Submersible single-stage centrifugal pump.

- Pumping of abrasive and corrosive liquids
- All hydraulic components which are in contact with the liquid are made of SICcast®
- Suction flange: Vertical (including suction strainer)
- Discharge flange: Radial
- Closed impeller with three-dimensionally curved vanes
- Dual mechanical seal arrangement with a pump side bellow seal.
- Moisture sensor in an oil reservoir between pump and motor
- Stainless steel submersible three-phase motor (IP68)
- Optimized design ensures easy maintenance and long service life even under difficult conditions

Fields of Application

Handling of abrasive and corrosive liquids.

- Flue gas desulfurization
- Chem. industry
- Water treatment
- Seawater desalination
- Fertilizer industry / potash industry

Materials

Volute casing:	SICcast®
Impeller:	SICcast®
Shaft:	1.4462
Mechanical seal:	Silicone carbide (SiC)

Technical Data

Pump Size:	DN 32 to DN 150 (1 ¼" to 6")
max. Pressure:	10 bar (150 PSI)
max. Flow:	320 m³/h (1400 gpm)
Total head:	up to 90 m (295 ft)
Rotating Speed:	up to 3600 rpm

Motor

Stainless steel submersible three-phase motor (IP68).

Motor adaptor

Stainless steel.

Casing Cover

SICcast® mineral cast.

Dual mechanical seal

Dual mechanical seal arrangement with a pump side bellow seal.

Impeller

SICcast® mineral cast closed impeller with three-dimensionally curved vanes.

Volute Casing

SICcast® mineral cast.

Strainer

Suction side strainer protect the pump from entry of large particles.

Vertical turbine pump

TYPE MCV

Made of corrosion resistant materials.

MCV Design

Single-stage vertical centrifugal sleeve-bearing pump.

- Handling of abrasive and corrosive liquids
- Vertical mixed flow pump designed for desalination plants to work as intake pump
- Suitable for a wide flow range
- Suction flange: Vertical
- Discharge flange: radial
- SICcast® - inlet housing and diffuser withstand hard particles
- Shaft sealing by a single acting mechanical seal
- Polygon sleeve bearings support long shafts and protect against vibration. Radial bearings made of SiC on SiC
- The modular design makes it possible to produce extremely large pumps at low costs

Fields of Application

Handling of abrasive and corrosive media.

- Seawater intake
- Water treatment plants
- Cooling in power plants

Materials

All wetted parts (except shaft) are made of metal free materials to avoid corrosion totally.

Different shaft materials available according to the application requirements.

All hydraulic parts and the discharge bend are manufactured in SICcast[®]. Anti-corrosion lifetime guarantee for all SICcast[®] parts in seawater applications.

Technical Data

Pump Size:	DN 150 to DN 1000 (6" to 40")
max. Pressure:	8 bar (120 PSI)
max. Flow:	12500 m³/h (55000 gpm)
Total head:	up to 60 m (180 ft)
Rotating Speed:	up to 1800 rpm

Inlay

Discharge bend fully lined with SICcast® - minimises abrasion and maximises corrosion resistance.

Tube construction

Modular design of shaft and rising main provides flexibility in length.

Bowl with guide vanes

made of SICcast® - resistant to hard particles.

Motor connection

Flexible connection for different motor sizes.

Bearing

Reliable thrust bearing. The lubrication system ensures a long bearing life time. Single acting mechanical seal by standard, gland packing also available.

Radial Bearing

Optimized shaft guidance for minimized vibrations.

Impeller

SICcast® mineral cast mixed flow impeller with three-dimensionally curved vanes, optimized for efficiency. Keyed to the shaft and bolted from the bottom. Additional radial bearing close to the impeller.

Silicon carbide

Epoxy resin

Polished section scale 500:1

SiCcast®

1. Bonding Agent
2. Bonding Agent that has penetrated into a SiC grain
3. ground, polished SiC grain

SiCcast® the Company

Established in the mid-nineties, SiCcast® is growing together with our customers.

Started with the casting of several pump parts for the MC series and afterwards for the MCC series of affiliated company **DÜCHTING** pumps.

The important key feature of the material is the simultaneous resistance against corrosion and abrasion. SiCcast® materials are designed for this phenomenon of erosive corrosion. On the basis of the hardness of silicon carbide, 9.7 on the Mohs' scale (hardness close to diamond) and the high filling grade of the components, it has very good results in casting new pump parts and also in coating worn spare parts.

Mineral cast SiCcast®

Hard as a Diamond.

Silicon carbide (SiC) in a special mixture with Epoxy resin cast into precision moulds under vacuum. Fittings are machined with diamond tools. Thanks to the temperature-controlled casting process, parts of up to 8 tons can be cast.

This material is extremely wear resistant, temperature insensitive and shockproof. It is mainly used in heavy conditions such as in flue gas desulfurization of coal-fired power plants, incineration plants, fertilizer production, titanium dioxide and iron oxide production.

Operational Experience

Pictures of a Duplex Stainless Steel impeller which has been replaced by a SICcast impeller.

Impeller made of Duplex Stainless Steel

Heavy wear after 11,000 operating hours

Advantages

- **Highly wear resistant**
- **Fully corrosion resistant**
- **Easy quality control of castings**
- **Lower noise & vibrations compared to metal**

Impeller made of SICcast®

No wear after 24,000 operating hours

Comparison with Metal

In regards of resistance, metals are only a compromise between conflicting requirements.

Having only corrosion and no abrasion, it will be also possible to use hastelloy. It's the same with abrasion only. Abrasion in a neutral medium can be done by using Ni-hard or similar.

Miller Wear Test

Standard test method for determination of slurry abrasivity.

The Miller Number is an index of the relative abrasivity of slurries. Its primary purpose is to rank the abrasivity of slurries in terms of the wear of a standard reference material. The wear damage on the standard wear block is worse as the Miller Number gets higher.

The mineral cast from SICcast® covers both corrosion and abrasion perfectly.

SICcast® materials will be very advantageous if you have solid in combination with a non-neutral medium, a leach or an acid (pH-value 0-12).

Grafik: TU Clausthal

	Loss in weight [mg]	Loss in volume [mm ³]
SICcast EP 135	57,12	22,66
SIConit	75,13	33,10
1.4404	1.528,15	192,22
Alloy 625	1.297,16	152,66
1.4462	1.093,17	140,15
St52	1.023,48	130,38

SICcast® PLUS

SICcast® PLUS is a silicon carbide ceramic.

Silicon carbide ceramics are used where high wear is expected and can be recommended, where difficult operating conditions - for example, chemical attack or high temperatures - are expected. The innovation in the patented SICcast® PLUS method, is the combination of SICcast® casting with the production process of silicon infiltrated silicon carbide (SiSiC).

So it is possible to manufacture SiSiC-ceramic components that are subject to shrink by only one percent more than the production chain and therefore not technically difficult to construct than metal castings. In contrast to the conventional production methods can be produced economically from SICcast® PLUS very large and complex components.

Since ceramics have different material properties than steel, for each desired component a feasibility study and a development process are required.

For repairing SIConit®

A repairing kit with similar characteristics as SICcast®

SIConit® is a silicon carbide coating compound for the repair and protection of metallic surfaces exposed to abrasion, corrosion and acids pH-value 0 - 12.

SIConit® has a very high silicon carbide content for use in extremely abrasive operational conditions where complex and costly repairs are the norm. The compound can either be used to completely rebuild worn metal surfaces or be used as a preventative coating, often outperforming the original metal in terms of abrasive stability. SIConit® can be used in place of metal applications, tiling, rubber backing and other coatings.

Hard wie Diamant Hard as a Diamond

The entire SICcast® product spectrum

Beside the mineral cast SICcast - EP135, SICcast® is constantly developing new materials:

SIConit®

- **trowelable** wear protection for applications

SIConit® K

- **castable** wear protection

SIConit® M

- **trowelable** wear protection for areas such as pores and joints

SIConit® F

- **brushable** wear protection for smooth surfaces and for optimizing the efficiency

SIOSIC®

- an inorganic high-temperature wear and corrosion resistant material based on silicate technology

SICcast® PLUS

- silicon carbide ceramic

What can SICcast® do for you?

You have a problem - SICcast® offers the solution.

Beside the products for DÜCHTING PUMPEN, SICcast® is supplying **plug and play spare parts** for other manufactures

For example

- **all pump parts**
- **pump adapters**
- **nozzles**
- **hydrocyclones**
- **agitators**

For detailed information visit www.SICcast.com

Wear resistant pump

TYPE WR

Designed to handle slurries.

WR Design

Horizontal single-stage centrifugal pump in back pullout design.

- Pumping of abrasive and corrosive liquids
- Suction flange: axial
- Discharge flange: Top (DN 32 to DN 250 vertical, from DN 300 tangential)
- Closed and open impeller available
- Impeller is keyed to the shaft; reverse rotation (e.g. back-flushing) is possible
- Re-adjustable inclined gap between the impeller and volute casing to optimize the efficiency and differential pressure after prolonged operation
- Shaft sealing by means of **DÜTEC®** single mechanical seal with external springs (gland packing and other mechanical seals available)
- Durable, oil-lubricated roller bearings
- Back pullout design (the complete rotating assembly can be removed while the casing remains on its position)
- Optimized design ensures easy maintenance and long service life even under difficult conditions
- Direct or belt driven
- Different arrangements available

Fields of Application

Handling of high-temperature slurries and abrasive/corrosive media.

- Flue gas desulfurization (lime / gypsum slurries)
- Cleaning equipment for heat exchangers
- Construction industry (cement-water mixture)
- Potash industry (caustic potash solution, mixed salts/brine)
- Fertilizer Industry
- Mineral processing and refining

Materials

Available in almost any metal from cast iron to SUPER DUPLEX stainless steel.

The materials are carefully selected depending on the application, the pumped medium and the combinations of materials adapted to the respective conditions of use.

Technical Data

Pump Size:	DN 32 to DN 800 (1 1/4" to 32")
max. Pressure:	16 bar (230 PSI)
max. Flow:	12000 m³/h (52800 gpm)
Total head:	up to 120 m (395 ft)
Rotating Speed:	up to 3600 rpm

Bearings

Oil lubricated antifriction bearings.

Bearing Housing

Designed to guarantee continuous bearing lubrication. Provided with oil sight glass.

Wear plates

Wear plates on suction and discharge side.

Impeller

Optimized vane design for highest efficiency and lowest wear. Cast in ceramic moulds
Different impeller sets available for every pump size.

Volute Casing

Available in almost any metal from cast iron to SUPER DUPLEX stainless steel. Optimized by numerical calculations for optimized outflow and efficiency.

Heavy duty pump

TYPE WRX

Suitable for medium with very high solid content.

WRX Design

Highly wear-resistant centrifugal pump with armored volute casing and wear plates.

- Handling of very abrasive and corrosive media with high to very high solid content
- The design allows the use of very hard materials
 - ▶ up to 600 HB
- Suction flange: Axial
- Discharge flange: Top (Tangential)
- The overhung impeller has pumping vanes on the back shroud and is axially adjustable.
- Large impeller diameter for low, wear-reducing speeds
- Impeller is keyed to the shaft; reverse rotation (e.g. back-flushing) is possible
- Shaft sealing by stuffing box, mechanical seal, or hydronamic shaft seal
- Durable, oil-lubricated roller bearings to reduce vibration
- The modular construction system reduces inventory costs
- Direct or belt driven, gear box possible
- Different arrangements available
- Back pullout design (the complete rotating assembly can be removed while the casing remains on its position)

Fields of Application

Suitable for pumping highly abrasive / corrosive media with high to very high solid content.

- Coal and ore mining
- Steel and iron works
- Incinerators
- Chemical industry
- Sand and gravel processing plants
- Potash industry (caustic potash solution, mixed salts/brine)

Materials

Available in almost any metal from cast iron to SUPER DUPLEX stainless steel.

DÜCHTING PUMPEN offers improved highly abrasion resistant materials like chilled cast iron with hardness up to 600 HB.

Technical Data

Pump Size:	DN 65 to DN 400 2 1/2" to 16"
max. Pressure:	16 bar (230 PSI)
max. Flow:	4000 m³/h (18000 gpm)
Total head:	up to 90 m (300 ft)
Rotating Speed:	up to 1200 rpm

Bearings

Oil lubricated antifriction bearings.

Bearing Housing

Heavy duty design to handle high dynamic loads.

Wear plates

On suction and discharge side.

Volute Casing

Heavy-volute casing design.

Impeller

Large impeller diameter for low, wear-reducing speed.

Submersible pump

TYPE WRS

Designed to handle slurries.

WRS Design

Single-stage vertical centrifugal submersible pump.

- Pumping of abrasive and corrosive liquids
- Available in almost any metal from cast iron to SUPER DUPLEX stainless steel
- Suction flange: Vertical (including suction strainer)
- Discharge flange: Radial
- Closed impeller with three-dimensionally curved vanes
- Re-adjustable inclined gap between impeller and wear plate to optimize the efficiency and the differential pressure after longer operation
- Single acting mechanical seal
- Moisture sensor in an oil reservoir between pump and motor
- Submersible IEC three-phase motor (IP68)
- Optimized design ensures easy maintenance and long service life even under difficult conditions

Fields of Application

Handling of abrasive and corrosive media.

- Flue gas desulfurization
- Chem. industry
- Water treatment
- Seawater desalination plants
- Fertilizer industry / potash industry

Materials

Volute casing:	Duplex stainless steel
Impeller:	Duplex stainless steel
Wear plate:	Duplex stainless steel
Shaft:	1.4462
Mechanical seal:	silicone carbide (SiC)

Technical Data

Pump Size:	DN 32 to DN 150 (1 1/4" to 6")
max. Pressure:	10 bar (150 PSI)
max. Flow:	550 m³/h (2500 gpm)
Total head:	up to 90 m (300 ft)
Rotating Speed:	up to 3600 rpm

Impeller

Design in consideration of optimal specific speed cast in ceramic moulds. Different impeller sets available for every pump size.

Wear plate

One or two wear plates are possible.

Motor

Submersible three-phase motor
(IP68).

Volute Casing

Available in almost any metal
from cast iron to SUPER
DUPLEX stainless steel.
Optimized by numerical
calculations to achieve best
efficiency.

Vertical centrifugal pump

TYPE WRV

Designed to handle slurries.

WRV Design

Vertical single-stage centrifugal pump in semi-submerged design.

- End-suction type slurry pump
- Pumping of abrasive and corrosive media
- Discharge flange: DN 32 to DN 250 radial, from DN 300 tangential
- Closed and open impeller available
- Impeller is fixed by fitting key; reverse rotation (e.g. back-flushing) is possible
- Re-adjustable inclined gap between the impeller and volute to optimize the efficiency and differential pressure after prolonged operation
- Grease-lubricated, maintenance-free bearings
- Customized immersion depth possible
- Optimized design ensures easy maintenance and long service life even under difficult conditions
- Direct or belt driven design

Fields of Application

Handling of abrasive and corrosive media.

- Flue gas desulfurization (lime / gypsum slurries)
- Cleaning equipment for heat exchanger
- Construction industry (cement-water mixture)
- Potash industry (caustic potash solution, mixed salts/brine)
- Fertilizer Industry
- Mineral processing and refining

Materials

Available in almost any metal from cast iron to **SUPER DUPLEX stainless steel**.

The materials are carefully selected depending on the application, the pumped medium and the combinations of materials adapted to the respective conditions of use.

Technical Data

Pump Size:	DN 32 to DN 400 (1 1/4" to 16")
max. Pressure:	16 bar (230 PSI)
max. Flow:	4000 m³/h (17600 gpm)
Total head:	up to 120 m (395 ft)
Rotating Speed:	up to 3600 rpm

Arrangement:

Belt driven.

Impeller

Designed in consideration of optimal specific speed cast in ceramic moulds.
Different impeller sets available for every pump size.

Bearing

Heavy duty bearing arrangement with (lifetime) grease lubrication. The modular shaft design allows high design variability and easy maintenance.

Arrangement:

Direct driven.

Volute Casing

Volute casing with single or double volute. Available in almost any metal from cast iron to SUPER DUPLEX stainless steel. Optimized by numerical calculations to achieve best efficiency.

Process pump

TYPE IP

Handles slightly abrasive and corrosive medium.

IP Design

Single stage end-suction, centrifugal pump.

- Horizontal centerline mounted
- Back pullout design (the complete rotating assembly can be removed while the casing remains on its position)
- Continuous operation in industrial processes for pumping clean and corrosive liquids
- Double volute casing for extended bearing and seal life time
- Wear rings in composite material to maintain best efficiency and reliability
- Pump casing design up to 100 bar
- Oil or grease lubricated bearings
- Cartridge mechanical seal, seal plan as per API
- Vertical installation optional available
- Design in accordance with API 610 if specified

Fields of Application

Suitable for handling of slightly abrasive and corrosive liquids.

- Pressure boosting systems in industrial processes
- Water supply, and water treatment
- Seawater desalination
- Hot water applications
- Oil & Gas - Applications
- Feed water circulation

Materials

Available in almost any metal from cast iron to SUPER DUPLEX stainless steel.

The materials are carefully selected depending on the application, the pumped medium and the combinations of materials adapted to the respective conditions of use.

Technical Data

Pump Size:	DN 50 to DN 450 (2 1/2" to 18")
max. Pressure:	100 bar / 15 bar (1450 PSI / 220 PSI)
max. Flow:	4200 m³/h (18500 gpm)
Total head:	up to 220 m (720 ft)
Rotating Speed:	up to 3600 rpm

Shaft

Critical shaft speed above operating speed.

Seal

Single or double mechanical seal in cartridge design.

Bearing Housing

Designed to guarantee the continuous bearing lubrication. Provided with oil level indicator.

Bearings

Oil or grease lubricated anti-friction bearings.

Wear rings

Replacable rings in composite material to maintain best efficiency and reliability.

Volute Casing

Optimized by numerical calculations to achieve best outflow conditions.
Double volute casing to reduce the radial thrust.

Impeller

Design in consideration of optimal specific speed
Cast in ceramic moulds
Different impeller sets available for every pump size.

Ring section design pump

TYPE HPH

Suitable for slightly polluted, chemically neutral or aggressive liquids.

HPH Design

Multistage centrifugal pump in ring-section design.

- Pump inlet: axial or radial with flanges positioned at 90° increments
- Discharge flange: radial positioned at 90° increments
- Replacable rings in composite material to maintain best efficiency and reliability
- Shaft sealing by stuffing box or mechanical seal
- Axial thrust compensation by balancing discs, balancing drum or combination of both
- Easy replacement of all wearing parts
- Tailormade solutions available:
 - **Pump dimensions can be adapted to customer requirements**
- Impellers are fixed by fitting key (e.g. backflushing) possible
- Impeller wear rings available
- Pump with one or two connective shaft ends
- Impellers and diffusers are cast by using ceramic moulds to get smooth surfaces for outstanding hydraulic performance

Fields of Application

Handling of clean or slightly polluted, chemically neutral or aggressive liquids.

- Pressure boosting systems in industrial process
- Water supply, and water treatment
- Seawater desalination
- Condensate production
- Boiler feed systems
- Hot water applications
- Petrochemical applications
- Water Injection

Materials

Carefully selected depending on the application and adapted to the respective conditions.

DÜCHTING PUMPEN offers improved corrosion resistant materials like SUPER DUPLEX stainless steel with Pitting Resistance Equivalent numbers above 40.

Technical Data

Pump Size:	DN 80 to DN 300 (3" to 12")
max. Pressure:	100 bar (1450 PSI)
max. Flow:	3500 m³/h (15400 gpm)
Total head:	up to 1100 m (3600 ft)
Rotating Speed:	up to 3600 rpm

Diffuser

With reduced impact losses due to CFD optimized flow channels.

Impeller

Design in consideration of optimal specific speed.
Cast in ceramic moulds.
Different impeller sets available for every pump size.

Wear Rings

Replacable wear rings in composite material to maintain best efficiency and reliability.

Axial Suction branch available

In horizontal orientation for constant inlet velocities and reducing suction pressure requirements.

Medium lubricated friction bearing

Plain bearing eliminates second mechanical seal (for axial inlet).

Bearings

Supplied with oil-lubricated anti-friction bearings or plain bearings for long-life performance.

Discharge Casing

Optimized by numerical calculations to achieve best outflow conditions.

Balancing Device

Axial thrust compensation by balancing discs, balancing drum or combination of both.

Multistage pump

TYPE HPE

Suitable for slightly polluted, chemically neutral or aggressive liquids.

HPE Design

Multistage centrifugal pump in ring-section design.

- Center-line or foot-mounted casings available
- Wear rings in composite material (carbon fiber filled PEEK) for smaller clearances while maintaining the same reliability and best efficiency
- Intermediate discharge flange available
- Available with anti-friction or sleeve bearings, forced lubrication possible
- Jacket or shaft seal cooling possible
- Tailormade solutions available:
 - **Pump dimensions can be adapted to customer requirements**
- Shaft sealing by stuffing box or mechanical seal
- Axial thrust handled by balance disk or balancing drum
- Easy replacement of all wear parts

Fields of Application

Handling of clean or slightly polluted, chemically neutral or aggressive liquids.

- Pressure boosting systems in industrial process
- Water supply or water injection
- Condensate production
- Boiler feed systems
- Hot water applications
- Descaling in steel plants
- Oil & Gas - Applications (handling formation water)

Materials

Available in almost any metal from cast iron to SUPER DUPLEX stainless steel.

The materials are carefully selected depending on the application, the pumped medium and the combinations of materials adapted to the respective conditions of use.

Technical Data

Pump Size:	DN 50 to DN 300 (2" to 12")
max. Pressure:	250 bar (3600 PSI)
max. Flow:	3500 m³/h (15400 gpm)
Total head:	up to 2200 m (7218 ft)
Rotating Speed:	up to 3600 rpm

Discharge Casing

Optimized by numerical calculations to achieve best outflow conditions.

Balancing Device

Axial thrust compensation by balancing discs or balancing drums.

Impeller

Design in consideration of optimal specific speed cast in ceramic moulds. Different impeller sets available for every pump size.

Wear Rings

In carbon fiber reinforced PEEK for minimizing flow losses and for outstanding reliability.

Diffuser

With reduced impact losses due to CFD optimized flow channels.

Shaft sealing

Different seal plans available.
Jacket cooling possible.

Bearings

Supplied with oil-lubricated anti-friction bearings or plain bearings for long-life performance.

Multistage pump

TYPE HPXL

Handles liquids with up to 10% solids.

HPXL Design

Multistage centrifugal pump in ring-section design.

- Flanges positioned at 90 ° increments
- Shaft sealing by stuffing box or mechanical seal
- Axial thrust compensation by individually balanced impellers
- Designed for 4-pole speed
- Reduced life-cycle costs
- Grease or oil-lubrication available
- Tailormade solutions available:
 - Pump dimensions can be adapted to customer requirements
 - Single or double inlet suction casing available
 - Discharge flanges available on intermediate stage casings
 - Drive from one or both shaft ends possible
- Closed impeller with three-dimensionally curved blades
- Impeller fixed with fitting key

Fields of Application

Handling of contaminated, chemically neutral or aggressive liquids with up to 10% solids.

- Main water drainage in mining
- In addition to drainage and mine weather cooling in mining
- Pressure boosting systems in industrial processes
- Water supply and water treatment plants
- Condensate production
- Mineral industry
- Oil & Gas Applications

Technical Data

Pump Size:	DN 32 to DN 300 (1 1/4" to 12")
max. Pressure:	40 bar (580 PSI)
max. Flow:	2500 m³/h (11000 gpm)
Total head:	up to 400 m (1300 ft)
Rotating Speed:	up to 3600 rpm

Materials

Available in almost any metal from cast iron to SUPER DUPLEX stainless steel.

The materials are carefully selected depending on the application, the pumped medium and the combinations of materials adapted to the respective conditions of use.

Suction Chamber

Advanced design for constant inlet velocities.

Bearings

Grease or oil-lubricated anti-friction bearings for long-life performance.

Wear Rings

Outstanding reliability while minimizing flow losses.

Impeller

Optimized design for specific speed. Cast in ceramic moulds for smooth surfaces. High efficiencies achieved by using different impeller sets for each pump size.

Diffuser

CFD optimized flow channels resulting in reduced impact losses.

Discharge Casing

CFD designed to achieve optimal discharge conditions.

Multistage pump types

TYPE HPXU & HPXM

Handles liquids with up to 10% solids.

HPXU & HPXM Design

Multistage centrifugal pump in ring-section design.

- Flanges positioned at 90 ° increments
- Shaft sealing by stuffing box or mechanical seal
- Axial thrust compensation by balancing device with optical or digital wear indicator for optimized maintenance control
- Designed for 4-pole speed
- Reduced life-cycle costs
- Grease or oil lubrication available
- Tailormade solutions available:
 - Pump dimensions can be adapted to customer requirements
 - Single or double inlet suction casing available
 - Discharge flanges available on intermediate stage casings
 - Drive from one or both shaft ends possible
- Closed impeller with three-dimensionally curved blades
- Impeller fixed with fitting key

Fields of Application

Handling of contaminated, chemically neutral or aggressive liquids with up to 10% solids.

- Main water drainage in mining
- Drainage and mine weather cooling in mining
- Pressure boosting systems in industrial processes
- Water supply and water treatment plants
- Condensate production
- Mineral industry
- Oil & Gas - Applications (handling formation water)

Technical Data

Pump Size:	DN 32 to DN 400 (1 1/4" to 16")
max. Pressure:	160 bar (2300 PSI)
max. Flow:	3250 m³/h (15000 gpm)
Total head:	up to 1200 m (3940 ft)
Rotating Speed:	up to 3600 rpm

Materials

Available in almost any metal from cast iron to **SUPER DUPLEX stainless steel**.

The materials are carefully selected depending on the application, the pumped medium and the combinations of materials adapted to the respective conditions of use.

Bearings

Grease or oil-lubricated anti-friction bearings for long-life performance.

Wear Rings

Outstanding reliability while minimizing flow losses.

Suction Chamber

Advanced design for constant inlet velocities.

Impeller

Optimized design for specific speed. Cast in ceramic moulds for smooth surfaces. High efficiencies achieved by using different impeller sets for each pump size.

Diffuser

CFD optimized flow channels resulting in reduced impact losses.

Discharge Casing

CFD designed to achieve optimal discharge conditions.

Balancing Device

Axial thrust compensation by balancing discs or balancing drums.

Tailormade Solutions

The pump solutions of DÜCHTING PUMPEN are adapted in their design and construction to meet the demanding needs of the market.

Besides the standard products DÜCHTING PUMPEN can offer a wide variety of different tailormade solutions.

Some examples are shown here, but there are many more possibilities.

Just let us know how we can help you!

Two flanges in one suction casing

Intermediate flange at stage casing

Together with the pumps DÜCHTING PUMPEN can supply a wide range of accessories – from electrical motors to gear boxes, turbines, frequency converters up to complex instrumentation.

Plug & Play

Beside tailormade solutions DÜCHTING PUMPEN offers retrofit designs.

These Plug & Play solutions can help the customers to find a solution for problematic or critical pumps in their plants.

With a retrofit pump DÜCHTING PUMPEN delivers a product which can be installed in the existing footprint and can be put into operation easily.

DÜCHTING PUMPEN has designed a new retrofit pump series (MCCR) especially to replace absorber pumps in the FGD process.

Customer's installation dimensions (MCCR)

To reach the interchangeability DÜCHTING PUMPEN

- designs special/new hydraulics to reach the original duty point conditions
- adjusts the pumps to existing dimensions

Adjustment feet

Adjustment reducers & retrofit base frame

Life-Cycle-Costs

Average life cycle costs for industrial pumps.

Evaluating the Life-Cycle-Costs will identify the most financially attractive alternative.

The initial purchase price is a very small part of the life cycle cost for high usage pumps.

Minimizing energy consumption and plant downtime have a big influence on the total Life-Cycle-Costs.

Energy costs

DÜCHTING PUMPEN offers a wide range of impeller sets for high efficiencies.

► **high efficiency leads to low energy costs**

Maintenance costs

Robust design leads to long lifetime of the pump parts.

► **low wear leads to low maintenance work and costs**

Easy accessible and changeable wear parts lead to short downtime for overhauls.

► **short downtime leads to low maintenance costs**

Quality Assurance

To ensure highest quality, every pump is tested and certified on our test bed according to international standards.

DÜCHTING PUMPEN is able to provide extensive testing beside the standard performance tests. This includes tests like sound pressure, hydrostatic and vibration tests as well as string test of complete pump units.

Try & Buy

To ensure that the pumps will work properly under the given conditions in the plant and to convince the customer, „Try & Buy pumps“ can be supplied.

Discuss with us if you are interested.

In-house Test Bed

Continuously high quality of each single pump due to performance tests according to

- ISO 9906 standard
- Modern computer-aided test bed
- Capacity: up to 25,000 m³/h [110,000 gpm]
- Delivery Head: up to 2,200 m [7,200 ft]
- Electrical Power: up to 5,000 kW [6,700 hp]
- Witnessed inspection tests
- ISO 9001 certified since 1994

Service & Spare Parts

With its service and spare parts department DÜCHTING PUMPEN offers the full range of after-sales-service.

With its own service technicians and several service partners worldwide DÜCHTING Service is everywhere and always available.

Inhouse - Service

- Maintenance
- rebuild & repair
- damage analysis
- performance tests with vibration analysis
- site staff training
- and much more

Please contact us at:

+49 23 02 / 969 - 0

or send a message to service@duechting.com

Site - Service

- start-ups
- commissioning assistance
- Revisions
- Repairs
- Troubleshooting
- laser alignment
- vibration & condition analysis
- flow rate measuring
- whole pump rebuild and repair
- mechanical seal exchange
- training at site
- and much more

DPNA - DÜCHTING PUMPS North America LP

DPNA was founded in 2010 as DÜCHTING's first satellite sales office to focus on the US and Canadian FGD, mining, sea water desalination, and industrial markets. DPNA has been very successful in these markets and as a result has added an additional sales office, a service partner and manufacturers' representatives in key geographic locations.

DPNA works closely with the factory but these capabilities, combined with DPNA's Sales Engineers' education and extensive industry and hands-on experience, allow us to offer responsive sales support as well as technical and field service support.

DÜCHTING PUMPS North America exists to give our customers DÜCHTING's world-class technology with the best US-based customer support available. Please contact us to find out how we can support you.

DPSA - DÜCHTING PUMPS South América

DPSA, our office for the South American market was established in response to customer needs for appropriate technical and commercial on-site-support for consumers, retailers, designers and consultancies in the region. In response to the growing demands for technical information, new technologies and highly reliable products in the field of desalination of sea water - mining and civil water pipes for power plants (FGD).

We see that the available technologies and a wide range of references, are an optimal starting point for DPSA.

We provide the best deals on very suitable and efficient solutions for your projects. We share the best technical and economic information and find the optimal solution.

Contact us and we will find out how we can support you.

DPRU - DÜCHTING насосы Russia & CIS

DPRU is a direct sales channel started in 2013, for the „on-site assistance“ and direct customer contact in Russia and the CIS. Placed in the second largest city of Russia, Saint-Petersburg, the sales team is focused on the areas of REA, mining, desalination and industrial applications. Many years of market-experience in the areas of sales, marketing and customer acquisition draw our employees in the cross-market and business.

DPRU exists in order to provide its world-class technology combined with the best Russian customer support DÜCHTING can provide.

Please contact us to find out how we can support you.

Representatives

Service points - whether by partners or on their own - are and will continue to be set up.
